

**SC5/4.1d** Use the idea of the Earth's rotation to explain day and night, and the movement of the sun across the sky

After clicking on each individual planet, which provides them with details, they are given a quiz section on each one (note taking comes into play)

"You answered all the questions correctly! Now it's time to learn how day turns to night and night turns to day"

Animation describing it pops up. Most simple descriptions, approx 25/30 seconds long

"It's time to start building your own solar system, why not draw some designs on the templates in your book first."
